Expected	• Improved customer satisfaction. • Increased efficiency in temple management. • Reduced overcrowding. • Faster booking process. • Better utilization of available

Problem–Solution Fit Summary

Problem

Traditional temple darshan booking methods involve long queues, manual processes, limited transparency, and inefficient crowd management, resulting in inconvenience for devotees and administrative challenges for temple authorities.

Solution

DarshanEase provides a centralized, web-based platform that enables devotees to book darshan tickets online, select preferred time slots, manage bookings, and receive a seamless

user experience. The system also empowers administrators to efficiently manage temples, bookings, and users through a secure dashboard.

Customer Value

- Convenient online booking.
- Real-time slot availability.
- Reduced waiting time.
- Improved crowd management.
- Secure authentication and booking.
- Accessible anytime and anywhere.

Business Value

- Digital transformation of temple services.
- Reduced manual workload.
- Improved operational efficiency.
- Better resource utilization.
- Easy scalability for multiple temples and future enhancements.

Conclusion

The **DarshanEase – Temple Darshan Ticket Booking System** effectively addresses the challenges faced by devotees and temple authorities by providing a secure, scalable, and user-friendly online booking platform. The proposed solution aligns with customer needs, enhances user satisfaction, and supports future expansion through a modern MERN Stack architecture.
