

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	
Project Name	
Maximum Marks	4 Marks

Functional Requirements

The following are the functional requirements of the proposed **DarshanEase – Temple Darshan Ticket Booking System**.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration using registration form
		Input validation for user details
		Secure password creation
FR-2	User Authentication	User login using email and password
		JWT-based authentication
		User logout
FR-3	User Profile Management	View user profile
		Edit personal information
		Change password
FR-4	Temple Management	View available temples
		Search temples
		View temple details
FR-5	Darshan Slot Management	Display available darshan slots
		Select preferred date and time
		Display slot availability
FR-6	Darshan Ticket Booking	Book darshan tickets
		Select number of devotees
		Generate booking confirmation
FR-7	Booking Management	View booking history
		Cancel booking
		View booking details

FR-8	Admin Authentication	Administrator login
		Secure admin dashboard access
FR-9	Admin Dashboard	View dashboard statistics
		Monitor bookings and users
FR-10	Temple Administration	Add new temples
		Update temple information
		Delete temples
FR-11	Slot Administration	Create darshan slots
		Update slot timings
		Delete slots
FR-12	Pooja Management	Add pooja details
		Update pooja information
		Delete pooja details
FR-13	User Management	View registered users
		Manage user accounts
FR-14	Database Management	Store and retrieve booking information
		Manage temple and user records

Non-Functional Requirements

The following are the non-functional requirements of the proposed solution.

N F	Non- Functional	Description
N F	Usability	The application provides a simple, responsive, and user-friendly interface that is easy to navigate for devotees and administrators.
N F	Security	User passwords are encrypted using bcrypt , authentication is handled using JWT , and protected routes prevent unauthorized access. Sensitive
N F	Reliability	The system ensures accurate booking information, consistent database operations, and reliable API responses with proper error handling.
N F	Performance	The application provides fast page loading, efficient REST API communication, optimized MongoDB queries, and responsive user
N F	Availability	The application is designed for continuous availability and can be deployed on cloud platforms such as Vercel , Render , and MongoDB Atlas for 24×7
N F	Scalability	The MERN stack and three-tier architecture support future enhancements, increasing users, additional temples, and deployment on scalable cloud

Summary

The **DarshanEase – Temple Darshan Ticket Booking System** fulfills all essential functional requirements, including user registration, authentication, temple management, darshan slot booking, booking management, and administrator operations. The application also satisfies key non-functional requirements such as usability, security, reliability, performance, availability, and scalability, making it suitable for a modern web-based temple booking platform.
