

Frontend Structure

Overview

The frontend of the **DarshanEase** application is developed using **React.js**, **TypeScript**, **Vite**, and **Tailwind CSS**. It is responsible for providing an interactive, responsive, and user-friendly interface for devotees and administrators. The frontend communicates with the backend through RESTful APIs to display and manage application data.

Frontend Folder Structure

Folder Description

1. public/

Stores static assets that are served directly by the web server.

Examples

- Favicon
- Static images

- Logos

2. assets/

Contains application resources used throughout the project.

Includes

- Images
- Icons
- Global styles

3. components/

Reusable UI components used across multiple pages.

Examples

- Navbar
- Footer
- Temple Card
- Slot Card
- Booking Form
- Loader
- Buttons
- Modal Dialogs

4. pages/

Contains complete application pages.

Pages

- Home
- Login
- Registration

- Temple Listing
- Temple Details
- Ticket Booking
- Booking History
- User Profile
- Admin Dashboard
- 404 Page

5. layouts/

Defines common layouts shared across pages.

Example

- MainLayout
- AdminLayout (optional)

6. routes/

Handles client-side routing using React Router.

Responsibilities:

- Define application routes.
- Protect authenticated pages.
- Redirect unauthorized users.

7. services/

Contains functions for communicating with the backend API.

Examples:

- Authentication API
- Temple API
- Booking API

- User API

8. hooks/

Stores reusable custom React Hooks.

Examples:

- User authentication
- API requests
- Form validation

9. context/

Implements React Context for global state management.

Examples:

- Logged-in user
- Authentication status
- Theme settings

10. utils/

Contains reusable helper functions and application constants.

Examples:

- Date formatting
- Validation functions
- Utility methods

11. types/

Defines TypeScript interfaces and custom types.

Examples:

- User

- Temple
- Slot
- Booking

Frontend Workflow

Page Navigation Flow

Advantages of the Frontend Structure

- Modular and reusable components.
- Easy navigation using React Router.
- Organized folder hierarchy.
- Scalable architecture for future features.
- Type safety with TypeScript.
- Responsive design with Tailwind CSS.
- Simplified API integration through service modules.
- Improved maintainability and readability.

Technologies Used

Technology	Purpose
React.js	Build user interface
TypeScript	Type-safe application development
Vite	Development server and build tool
Tailwind CSS	Responsive styling
React Router	Client-side routing
Axios	API communication
React Context	Global state management

Conclusion

The frontend structure of DarshanEase follows modern React development practices by separating reusable components, pages, services, routes, and utilities into dedicated folders. This modular organization improves code readability, simplifies maintenance, and enables efficient collaboration while delivering a responsive and user-friendly experience for both devotees and administrators.
